PHYSICAL ARCHITECTURE · BASELINE V2 · DRAFT

Physical architecture, target Azure deployment

* marks target-design items that the running demo implements in a thinner form (see notes)

NOTES

* Running demo today: ONE Container App (mpsdemo-api, 1 replica) in rg-mps-demo holds the web console, API, simulator, agents and mock systems.
* Demo messaging: in-process bus in that container instead of IoT Hub, Event Hubs and Service Bus. Same envelope, so it can be swapped later.
* Demo storage: SQLite on the container plus YAML metadata instead of Azure SQL and Data Explorer; data resets on redeploy by design.
* Not deployed in the demo: Front Door, WAF, API Management, AI Search, separate workers. Deployed: Entra ID, Key Vault, managed identity, Container Registry, Azure OpenAI, App Insights and Log Analytics. Deploys run from GitHub Actions with OIDC, no stored cloud secrets.
